micros®

Balancing the requirements of
a business

There is an array of elements that go into having an efficient, controlled and profitable restaurant or bar. You have guests to please, food to serve, servers to hire and supervise, tables to bus quickly and quietly, and checks to process unobtrusively and accurately. On the other hand, you have food orders to fulfill, ingredients to stock, costs to contain, payroll to manage, tips to report, and

books and documents to maintain for taxes. What you need is a system that can help facilitate and manage all these processes, freeing up your time to do the things that you enjoy most. MICROS, an established leader in hospitality technology, has developed MICROS e7 to help shrink your work day and increase your margins, cost-effectively.

Combines the reputation and reliability of MICROS hospitality technology with a price suitable for table service and quick service restaurants, delis, sandwich shops, nightclub/bar establishments, and more.

An all-in-one MICROS Workstation 4LX (WS4LX) or MICROS Workstation 5A (WS5A) employing powerful embedded software based on the Microsoft® Windows® Embedded CE operating system. With a fully functional configuration the need for a back office PC is eliminated

Scaled & Priced For Your Restaurant

MICROS professionals will customize MICROS e7 to reflect your restaurant's requirements, menu, prices, and business rules. Restaurant managers can also change menus and prices, add or edit employee information and perform other administrative functions instantly from any workstation within the restaurant. MICROS e7 is quick and easy to install, typically requiring less than a day on site. This guarantees minimal disruption to your business flow allowing you to focus on your customers.

Reduce labor costs with detailed data on individual servers and their productivity, enabling quick staffing decisions to be made which can reduce labor costs and increase profitability.

Improve agility and serve guests more effectively, and thereby create return customers. Users of the system may quickly make menu and price changes in the database from any workstation, which are automatically and immediately effective throughout the MICROS e7 network.

The optimum solution for customers wanting to act out of the restaurant more or those operating multiple sites, MICROS offers an interface to mymicros.net, our industry leading suite of enterprise solutions including Business Intelligence, Inventory, Menu Maintenance, and Customer Relationship Management. Your MICROS e7 Enterprise extends the capabilities of the MICROS e7 system beyond the four walls of a restaurant and provides remote visibility via an Internet Browser.

Prevent loss by eliminating inaccurate orders and oversights leading to waste and revenue loss that eat away at your profits. Ensure that no food or beverage is prepared unless it has been entered into the point-of-sale, preventing mistakes and/or omissions from the guests' bill.

Increase efficiency with a Beverage Control feature that questions unusual input, such as a table of four ordering only one drink, while comprehensive reporting capabilities enable you to protect and build profits by helping identify the best and worst selling menu items.

Improved reporting yields comprehensive on-demand data, both current and historical, providing restaurateurs with organized, detailed information required for staffing, menu management, payroll, and more. Interactive links allows users to dynamically drill down all the way to check detail, from any workstation on the system.

Requires little training time for your staff, making it a seamless transition to your guests. This system offers a full-color touch screen interface that provides fast and easy order entry and robust guest check features, as well as a built-in multi-language ability between the workstations and the printers, to help reduce losses due to misinterpretation by employees and customers that speak different, primary languages. Personal IDs or magnetic cards are set up to control access of users who can quickly make changes in the system using a graphical tool.

Optimized hardware, MICROS WS4LX and WS5A are reliable, solid-state devices that are designed with a restaurant's environment in mind. A standard POS client has a slender, stylish profile which blends into any ambiance, and because it does not require a fan or hard drive; it's quiet and inexpensive to run. Wireless capability gives MICROS e7 spatial flexibility, allowing you to arrange your restaurant or bar how you desire.

A return on your investment, MICROS e7 starts paying for itself from the moment it's installed. It eliminates manual errors, imposes requisition and production controls, automates manual processes and reduces the need for some headcount. This system substantially and positively affects your bottom line and enhances your quality of life.
